

# CALIFORNIA : Los Angeles Unified School District

Mean Scale Score CST Math 8th Grade (6/7 standards)

Percent 8th Grade Math Students Proficient and Advanced

Two schools that implemented the I CAN Learn® Education System experienced significant gains and surpassed district averages on the 2006 California Standards Test (CST).

After one year, Northridge Middle School found that their students' mean scores for mathematics had jumped by 20.4 scale points, surpassing the district's average score by 13 points. At the same time, the school increased the percentage of students scoring in the Proficient and Advanced categories of the state test by 11 percentage points. This allowed Northridge to finish the 2006 academic year well above district averages.

Sepulveda Middle School experienced similar gains. Mean scores on mathematics increased by 18.1 points, while the percentage of students scoring in the Proficient and Advanced categories increased by 10 percentage points. Prior to this the school's scores had remained below district averages. The I CAN Learn® Education System revitalized Sepulveda Middle School's math scores, allowing it to finish above district averages.

Therefore, after just one year of an I CAN Learn® implementation in LAUSD, two middle schools that previously performed below district averages nearly tripled the percentage of students scoring in the Proficient and Advanced categories of the CST, allowing them to finish well above district averages.
